

**COSURI DE FUM  
METALICE CU  
SIMPLU PERETE  
DIN OTEL INOX**

NIKO AUTO COM SRL  
V4-2018

*Este interzisa reprodarea, chiar si parțială, fără autorizarea Niko Auto Com.  
Niko Auto Com își rezerva dreptul de a modifica datele acestui catalog.*

## 1. Introducere

Cosurile de fum din inox simplu perete (SP) reprezinta solutia care impreuna cu cosurile dublu perete (DP) asigura o gama larga de solutii pentru evacuarea gazelor de ardere.

Pot fi folosite atat in aplicatii industriale cat si in domeniile civile.

In general se folosesc la adaptarea cosurilor vechi la cerintele actuale de evacuare a gazelor arse (intubari) si ca elemente de legatura intre un cos de fum dublu perete si agregatul de incalzire, in interiorul locuintei.

Prezentul catalog reprezinta un suport tehnic si informativ necesar pentru realizarea unui sistem de cos de fum conform normativelor in vigoare.

Buna functionare a unui cos de fum este data de corecta dimensionare a sectiunii cosului de fum.

Standardele europene care reglementeaza procedura de calcul a cosurilor de fum sunt:

-SR EN 13384-1 + A2 : 2008

-SR EN 13384-2 + A1 : 2009

Se pot folosi si diagrame care permit sa avem o idee initiala asupra diametrului cosului avand ca date de intrare puterea, tipul centralei precum si inaltimea cosului de fum.

Alegerea corecta a diametrului depinde de precizia procedurii de calcul din standardele enumerate mai sus.

*Este interzisa reproducerea, chiar si parciala, fara autorizarea Niko Auto Com.  
Niko Auto Com isi rezerva dreptul de a modifica datele acestui catalog.*

In vederea ajutarii instalatorilor si comerciantilor de cosuri de fum, firma noastra lucreaza la un soft care sa obtina rapid caracteristicile si lista de elemente (inclusiv desene tehnice) ale cosului de fum.

**ATENTIE! In nici-un caz diametrul cosului de fum nu va fi mai mic decat diametrul de iesire din centrala!**

## 2. Instalare

Instalarea cosului de fum se face in concordanta cu proiectul de executie, respectand normativele tehnice in vigoare, precum si prezentele instructiuni de montaj.

Montajul se poate executa atat la interiorul constructiei cat in exteriorul ei.

Se defineste cota de intrare a cosului dinspre agregat (cota ramurii centrale a racordului T dinspre agregatul de incalzire).

Plecand de la aceasta, se determina baza de sprijin a cosului de fum. Aceasta poate fi de doua tipuri:

- cu sprijin pe consola(vezi Anexa 1)
- cu sprijin pe fundatie(vezi Anexa 2)

Cosurile de fum cu simplu perete se pot folosi si pentru intubare (vezi Anexa 3)

Elementele cosului de fum se vor aseza in ordine de la baza spre partea superioara, respectand sensul sagetii de fum de pe eticheta de pe produs.

Aceasta insemanca ca partea "mama" va fi intotdeauna in sus iar partea "tata" in jos,pentru a asigura scurgerea condensului prin interiorul tubului interior spre capacul de condensatie.

Elementele se imbina si rigidizeaza unele cu celelalte cu ajutorul colierelor tip N atasate fiecarui element in parte.

La distantele prevazute in anexele 1 si 2 (B respectiv C), se monteaza coliere de fixare de eventual suporti intermediari, in functie de diametrul si inaltimea cosului de fum.

Tot in aceste tabele regasim inaltimea maxima neancorata (D).

Structura tipica a unui cos de fum (vezi anexa este):

- suportul de baza;
- colectorul de condens;
- gura de vizitare;
- racordul T de legatura cu agregatul de incalzire;
- elemente liniare pana la inaltimea stabilita;
- elemente de sustinere si descarcare a sarcinii;
- elemente de ocolire;
- capacul terminal.

## Anexa 1

Date tehnice privind instalarea  
cosurilor de fum  
cu un singur perete (SP)  
sprijinite pe consola

A=Distanța maxima intre doi suporti intermediari  
B=Distanța maxima intre doua coliere de fixare pe zid  
C= Inaltimea maxima neancorata

| Diametru interior [mm] | B [m] | C [m] | D [m] |

## Anexa 3

*Este interzisa reproduserea, chiar si parciala, fara autorizarea Niko Auto Com.  
Niko Auto Com isi rezerva dreptul de a modifica datele acestui catalog.*

De la racordul T al cosului de fum la agregat ,in functie de solutia aleasa, avem 2 tipuri de legaturi:

-elemente de cos simplu perete SP (elemente liniare, compensatorii, coturi, etc.);

-racord flexibil din inox cu elemente speciale de imbinare la capete.

La final se ataseaza la baza cosului, intr-un loc vizibil, placuta de inmatricularare conform SR EN 1443-2003.

Placuta de inmatricularare trebuie sa ramana fixata pe cos pe toata durata de functionare a acestuia.

### 3. Intretinere

Cosurile de fum din otel inoxidabil sunt rezistente la temperaturi inalte, la umiditate, la factorii chimici atmosferici si cei produsi de materiile combustibile din agregatul de incalzire. Cu conditia unei montari si intretineri corecte, au o durata de viata de minim 10 ani.

Inspectarea si curatarea cosurilor de fum trebuie facuta cel putin odata pe an de catre personal specializat. Neefectuarea la termen duce la anularea garantiei.

**ATENTIE! Necuratarea cosului de fum poate duce la acumularea de gaze de ardere, lucru care conduce la asfixierea persoanelor din locuinta. De asemenea exista riscul producerii de incendiu.**

Condensul format, care se acumuleaza in capacul de condensatie, trebuie evacuat la un sifon de pardoseala respectandu-se legislatia in vigoare cu privire la protectia mediului.

Daca se constata anomalii in functionare, cum ar fi: tiraj insuficient, scapari de fum, slabirea elementelor de prindere si fixare, mirosluri anormale, etc, se va lua legatura imediat cu un specialist in intretinerea cosurilor de fum sau cu firma producatoare.

**NOTA** In cazul nerrespectarii acestor instructiuni de instalare si intretinere societatea NIKO AUTO COM SRL nu isi asuma responsabilitatea pentru nici un defect sau nefunctionalitate aparuta.

**ATENTIE! Curatarea nu se face cu perii metalice!**

### 4. Descrierea produsului

Cosul de fum este o structura metalica cu sectiune rotunda.

Tuburile sunt sudate continuu pe generatoare pe masina automata WIG.

Materialul tubului este tabla inox W1.4301(AISI 304) cu grosimea de 0.5mm pentru diametre de pana la 400mm si 0.7mm pentru diametre mai mari sau egale cu 400mm.

Cosurile de fum metalice din inox produse de firma noastra se utilizeaza la agregatele de incalzire ce functioneaza pe combustibil gazos, lichid sau solid.

## 5. Marcarea componentelor

Niko Auto Com SRL a definit sistemul de cosuri de fum metalice din otel inox cu presiune negative in acord cu **SR EN 1856-1:2009**, avand notarea:

**T 400 W Vm L20050 G600** unde:

- T400** este clasa de temperatură
- N1** este clasa de presiune negative(tiraj natural)
- W** este rezistența la condens
- Vm** este rezistența la coroziune
- L20050** caracteristicile materialului canalului interior(W1.4301(AISI 304)) cu grosimea de 0.5mm
- G600** rezistența la focul din cos si distanta minima fata de materialele combustibile

Controlul productiei elementelor de cos de fum simplu perete se executa respectand Directiva 89/106/CEE, Legea nr. 608/2001 si HG nr. 622/2004, conform certificatului 2204-CPR-0368.

In conformitate cu SR EN 1856-1:2009 produsele noastre au marcat CE.
